Over 33% of projects fail for a variety of reasons, such as mismanagement, lack of clarity on project scope, insufficient funding or poor planning and execution. At tusp, we pride ourselves on having the experience and skillset to turn projects around and turn failure into success. Our highly successful experts are able to utilise their proven skills to identify issues and to set in place restorative measures to facilitate positive change, allowing projects to thrive and meet client and stakeholder expectations.

tusp consultants understand and integrate project turnaround protocol as part of their overall project delivery process. The key is to recognise and react quickly to early warning signs and instigate a review of original plans to highlight areas where change is required. Through discussion with all stakeholders and a robust review of work processes, it is then possible to formulate new solutions to place the project back on track.

Our experts are adept at undertaking this restructuring process in order to stabilise the future of a project, introducing check-in-points and milestones relevant to the project deliverables.

It may sometimes be necessary to break the project into smaller work pieces, allowing the client and consultant the opportunity for regular progress updates and allowing decisions to be made on any shifts in direction as the project evolves, without adding additional cost or extensions to deadlines.

tusp can assist you with a range of project turnaround services. Starting with a health check, we provide a report to our client to advise on the health and overall status of the project. We then provide recommendations to improve areas where the project is under-performing such as planning, engineering, project controls or delivery. We have solutions to fit any stage of your project and together with our experienced consultants we can support and drive better performance. This health check is critical in ensuring the early identification and rectification of any emerging issues that may affect the project's success.
